# Zomato Restaurant Analytics Dashboard

## Project Overview

The Zomato Restaurant Analytics Dashboard is an interactive Power BI project designed to analyze restaurant performance, customer preferences, pricing trends, and engagement metrics across multiple Indian cities. The dashboard provides business insights through data visualization and helps identify patterns in ratings, cuisine popularity, cost categories, and customer behavior.

---

## Page 1: Executive Overview

The Executive Overview page provides a high-level summary of the restaurant ecosystem. Key performance indicators such as Total Restaurants, Average Rating, Average Cost for Two, and Online Order Percentage offer a quick snapshot of overall performance.

### Key Insights

- Average restaurant rating is approximately 3.7 out of 5.
  - Nearly 75% of restaurants support online ordering.
  - Average cost for two is around ₹950.
  - Restaurant distribution varies significantly across cities and restaurant types.
- 

## Page 2: City Performance Analysis

This page focuses on comparing restaurant performance across different cities. It highlights variations in ratings, pricing, customer engagement, and digital adoption.

### Key Insights

- Ahmedabad has the highest number of restaurants in the dataset.
  - Jaipur records the highest average restaurant ratings.
  - Mumbai and Delhi have the highest average dining costs.
  - Online ordering adoption is strongest in major metropolitan cities.
  - Customer engagement levels differ significantly across cities.
- 

## Page 3: Cuisine Insights & Trends

The Cuisine Analysis page explores customer preferences and cuisine performance. It evaluates cuisine popularity, ratings, costs, and engagement metrics.

### Key Insights

- North Indian and Biryani cuisines are among the most popular categories.
- Continental and South Indian cuisines achieve the highest average ratings.

- Fast Food and Chinese cuisines generate strong customer engagement.
  - Premium cuisines generally command higher pricing while maintaining competitive ratings.
  - Customer preferences vary across cities and restaurant segments.
- 

## Page 4: Cost & Rating Intelligence

This page examines the relationship between restaurant pricing and customer satisfaction. It also identifies the most successful restaurants using engagement-based rankings.

### Key Insights

- Budget restaurants achieve ratings comparable to premium restaurants.
  - Higher prices do not always guarantee higher customer satisfaction.
  - Most restaurants fall within the Good (3.5–4.0) rating category.
  - Mid-range restaurants represent the strongest balance between popularity and affordability.
  - Engagement Score effectively combines customer ratings and vote volume to identify top-performing restaurants.
- 

## Business Conclusions

- Online ordering has become a standard feature across the restaurant industry.
  - Customer ratings remain relatively consistent across different price segments.
  - Cuisine diversity plays a major role in attracting customers.
  - City-specific strategies are important due to regional differences in pricing and engagement.
  - Engagement Score provides a more reliable measure of restaurant success than ratings alone.
- 

## Tools & Technologies Used

- Power BI Desktop
  - Power Query
  - DAX Measures
  - Data Modeling
  - Interactive Dashboards
  - Data Visualization
- 

## Dashboard Features

- Interactive Slicers and Filters
- KPI Cards
- Bar and Column Charts
- Scatter Plot Analysis
- Donut Charts
- Dynamic Tables
- Cross-Filtering and Drill-Down Analysis

This project demonstrates practical business intelligence skills, data visualization techniques, and analytical thinking using Power BI.
